

Title: Federal Dashboard on Sustainable Purchasing

Office: Council on Environmental Quality, in partnership with GSA and others as appropriate

POC: Marissa McInnis mmcinnis@ceq.eop.gov

Description of the Challenge: Create a visual dashboard on sustainable purchasing, by agency, using data captured in the government-wide procurement system. This could include slicing and dicing the data by various factor such as product/service, total dollars, number of contracts, by quarter/fiscal year, etc. to show where agencies are putting their dollars toward environmentally sustainable products and services.

Hopeful outcome: These insights will help agencies and the Federal Government as a whole visualize progress on sustainable purchasing, compare practices across agencies, identify gaps, and uncover opportunities to increase purchase of environmentally sustainable products and services, while also enhancing reporting capabilities.

Skills Needed:

Coding/development experience, end user interface expertise
